

A new company alliance that brings you added value

True to this motto, we would like to offer you, as our valued customer, more products and services in future.

We are therefore pleased to inform you that as of 1st January 2011, we will be uniting what ought to be united: the long-standing partner companies LEONHARD KURZ and h + m will be working in close collaboration with the established machine manufacturing company Baier.

This will bring together under one roof the three leading specialists in the area of hot stamping technology, which will enable us to offer you the best possible decoration solution. KURZ: the leading international company in the area of hot stamping foils; Baier Prägetechnik: an established and competent partner in the area of hot stamping machines and automation; h + m: a specialist in the area of hot stamping dies.

The aim of this initiative is to bundle the know-how of all the partners in such a way that you, our customer, can utilize the inherent advantages and value-adding benefits of a single-source complete solution. Whether it be an economical decoration solution, or a highly sophisticated tailored solution for decorating plastics – we will find an efficient solution, every time.

We look forward to offering you the combined international project experience of our three companies to support and assist you throughout the entire decoration process, from design to production startup right through to after sales service.

By bringing together the company Baier, as a specialist in the area of hot stamping machines and automation solutions, and KURZ's extended portfolio of roll-on stamping machines, we are now able to focus more intently on future challenges and new applications in the growing plastics segment of the market.

This includes developing new surfaces and functions, both individually and in combination. We have a wide variety of new machine designs on offer to suit different requirements, from our Basic Line to High Tech Line. In the area of stamping tools, we can design and manufacture high performance dies and workpiece receivers according to your exact specifications.

The focus of our activities is clearly on you, and we want to be measured by that.
Why not put us to the test!

Yours sincerely,

Christian Kramer,
Managing Director
