

IMD Foils

Decoration to Customer Requirements

There are a variety of options these days for decorating plastic parts during the injection mold process. We have optimized our coating technologies for the injection molding process, and are continuously further developing the IMD and IMD-Pro decoration methods.

Thanks to our comprehensive standard product lines and our additional expertise in creating custom-made foils, the design possibilities are virtually unlimited. Our solutions offer not only an attractive and elegant finish, but also a permanent decoration with the highest possible surface durability - a winning feature not only for notebooks, cell phones, faceplates and consumer electronics products.

You specify the requirements for your product - we will implement them and meet all the specifications of the large manufacturers. We develop industry-tailored, productspecific solutions, and support our customers from the design phase right through to mass production.

Advantages

- Precise transfer
- Slight (IMD) to medium
- (IMD-Pro) 3D deformation
- Continuous and singleimage designs possible
- Dry and solvent-free
