

LUXOR® /ALUFIN® KPW-OP

cold foil for overprinting

Main Characteristics

- fine definition with easy release
- suitable for fine line and broad area transfer
- high gloss
- good adhesion on all listed UV-adhesives used in the cold foiling process
- overprintable with UV curing inks

Substrates

- Plastic materials like PE, PP, PET
- Papers with non-absorbent surfaces
- Silver (AL), gold (385) and transparent version (TS).

Other shades on request.

As stated previously, the success of the transfer depends upon the combined performance of the components that comprise it - the foil, the adhesive, the printing method and the substrate used. The components listed are intended

solely to give the customer an indication of a suitable process system. In order to obtain optimum transfer results, we suggest that you yourself test the suitability of the combined components of your process for your particular application.
