

# LUXOR® /ALUFIN® KPW

## Cold Stamping Foil

### Main Characteristics

- special development for the cold stamping process with thinner metallization
- fine definition with easy release
- suitable for fine line and broad area stamping
- high gloss
- good adhesion on all listed UV adhesives used in the cold foiling process

### Substrates

- Plastic materials like PE, PP, PET
- Papers with non-absorbent surfaces

### Shades:

As stated previously, the success of the transfer depends upon the combined performance of the components that comprise it - the foil, the adhesive, the printing method and the substrate used. The components listed are intended solely to give the customer an indication of a suitable process system. In order to obtain optimum transfer results, we suggest that you yourself test the suitability of the combined components of your process for your particular application.
