

LIGHT LINE® KPO

Cold Foil

Improvement of the LIGHT LINE® KP regarding overprintability with UV-inks and UV-lacquers.

Main characteristics

- fine definition with easy release
- suitable for fine line and broad area transfer
- high gloss
- good adhesion on all listed UV-adhesives used in the cold foiling process
- overprintable with UV curing inks

Substrates

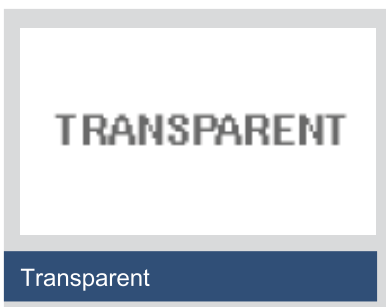

- plastic materials like PE, PP, PET and papers with non-absorbent surfaces

Adhesives

A list of known adhesive types and their manufacturers is provided on our special cold foil website: www.coldfoils.com

Colors

- ALUFIN® (silver), 385, transparent version (TS)

As stated previously, the success of the transfer depends upon the combined performance of the components that comprise it - the foil, the adhesive, the printing method and the substrate used. The components listed are intended solely to give the customer an indication of a suitable process system. In order to obtain optimum transfer results, we suggest that you yourself test the suitability of the combined components of your process for your particular application.
