Scratch-off Foils

For PVC Cards

- Scratch-off foil, hot stamped
- Numbering/Print
- Card

Our scratch-off foils serve as a tamper evident layer for personal authorization data on paper and plastic cards (i.e. passwords, PIN numbers, lottery ticket numbers etc.).

Scratch-off foils have two functions: they act as a visual barrier mask and as a validation seal. Only after the hot stamped foil has been scratched off, the secured information becomes visible.

The large variety of foil patterns provides attractive options for the creation of individualized card designs which can be tailored to specific target groups. On request, KURZ creates customized designs according to client specifications.

The advantages at a glance
- a wide variety of designs and qualities
- customized specific designs
- high opacity
- highly suitable for prepaid cards and raffle tickets
- adheres to all commonly used industry substrates (PVC, PET, paper, cardboard)
- vertical or roll-on stamping process at high-speed application

LOOP

New holographic scratch-off foil

Color up your Scratch-off Fields!

KURZ scratch-off f

selection of standa

series of striking fo

colors.

Scratch-off foils that catch the eye

LOOP puts an end to boring scratch-off fields. This extraordinary foil can be used for a lot more than just hiding data. Use LOOP as a decorative design element. Whether it be on vouchers, tickets or telephone cards - the radiant holographic colors will provide a special accent.

Z-version - data security plus

LOOP belongs to the Z-version of KURZ scratch-off foils. Integrated into the core of these foils is an especially opaque layer that makes it extremely difficult for unauthorized persons to read the PIN numbers, thereby optimally protecting the

data against unauthorized access. LOOP therefore not only provides a visual highlight but also offers ultrahigh protection against counterfeiting and manipulation.

LOOP - the most attractive way of covering data

LOOP is a bold, standard design in KURZ's range of colored holographic scratch-off foils. The design is available in vibrant violet (LUXOR® 341), radiant steel blue (LUXOR® 308), silver and gold. Additional colors and designs can be produced by request.
