

LIGHT LINE® KS

cold foil for sheet-fed printing

LIGHT LINE® KS foils are processed in line on sheet fed offset printing machines using standard offset printing dies and, in most cases, oxidative / conventionally drying offset adhesive technology. A LIGHT LINE® KSO variant, for decoration using UV technology, is currently in development. Foil transfer registration accuracy is comparable to that of other printing units.

Main characteristics

- specially developed for cold foil transfer applications
- high edge definition stamping and very easy release
- suitable for fine to large area designs and screens
- excellent gloss
- good bonding to all oxidative / conventionally drying adhesives commonly used in the cold foil transfer process

Substrates

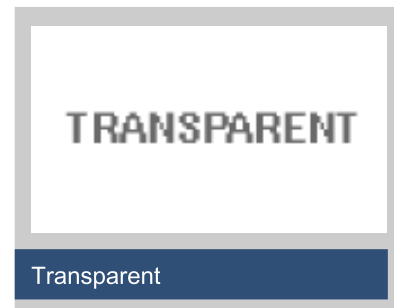

- Coated paper and cardboard

Adhesives

A list of known adhesive types and their manufacturers is provided on our special cold foil website: www.coldfoils.com

Colors

- Silver (AL), gold (385) and transparent version (TS).

LIGHT LINE® KSO

Cold foiling

- high edge definition transfer and easy release
- suitable for fine to large area designs
- very good gloss
- good adhesion to recommended adhesives
- overprintable with UV printing inks
